TERMINIX®

Signs of a potential bat problem.

Bat activity outside of a structure

Chattering, squeaking, or fluttering noises

Grease or rub marks at entry points

Ammonia-like odor that grows stronger over time

Bat guano (black fecal droppings, often found in piles)

Dead or injured bats or bat pups

Our 4-Step Bat Control & Exclusion Service

1. Inspect and identify

Experts conduct thorough inspection to identify areas where bats could enter your facility.

2. Eviction and exclusion

We seal all potential entry points, except those in active use. Then, we install specialized tools, such as bat cones or bat netting, that allow bats to exit but prevent re-entry. It can take approximately 2 weeks for bats to fully exit. Finally, we'll seal all remaining entry points.

3. Clean up (if required)

Our team will clean and remove any bat guano. This step can incur additional charges, depending on the level of cleanup.

4. Annual Monitoring (optional)

We'll come back annually to re-inspect and seal new entry points.

Common areas of bat activity.

- Attics and lofts
- Ceilings and structural voids
- Steeples, bell towers, and cupolas
- Chimneys
- Under eaves
- Under certain types of roof tiles
- Parking garages
- Stadiums
- Bridges and tunnels

TERMINIX GUARANTEE

Terminix Bat Exclusion Work is backed by a 1-year warranty. If bats return to the same space, we will come back to remove them and repair the exclusion work.[1]
