

Pest protection, tailored to your business.

The benefits of Terminix partnership.

We don't just eliminate pests, we prevent re-infestation with long-term monitoring and prevention plans.

Our pest management is customized to your unique needs for the most effective solutions possible.

Our service teams have unmatched expertise, with over 130+ hours of onboarding training.

Our treatments are rooted in science to ensure effective, lasting results.

Businesses of all types can be vulnerable to pest infestations, due to frequently open doors, foot traffic, deliveries, structural conditions, and more. You need pest protection that works around the clock.

A Pest Management Plan from Terminix® does just that, so you can focus on running your business. Our technicians are experts at removing pest problems and taking action to prevent future issues, customizing every step for your facility.

The impact of pests.

Pests aren't just unsightly. They can cause potentially serious issues and result in damage to your reputation.

- Deter customers
- Disrupt operations
- Cause unsanitary and unhealthy conditions
- Decrease productivity and efficiency
- Create an unpleasant working environment
- Damage structures, equipment, and products
- Result in health and food safety violations
- Prompt negative social media posts and reviews
- Cause product, revenue, and profit loss

What's included in your plan.

With coverage against two dozen common pests, our Pest Management Plan offers broad protection.

 **Ants**
 Argentine, Field, Odorous house, Pavement, Larger yellow

 **Cockroaches**
 German, American, Oriental, Brown-banded, Smokeybrown, Wood

 **Rodents**
 Roof rat, Norway rat, House mouse

 **Other**
 Ground beetles, Earwigs, Silverfish, Centipedes, Millipedes, House crickets, Spiders (excludes brown recluse and black widow species)

We offer additional specialized solutions for other pests including bed bugs, termites, stored product pests, and more!

Terminix plans are based on **integrated pest management (IPM)**, a scientific

approach that layers multiple control methods, focusing on prevention with monitoring alongside structural, storage, and sanitation improvements.

What you can expect.

STEP 1 DETAILED INSPECTION

Thoroughly inspect interior and exterior to identify pests, activity, and conducive conditions

STEP 2 PLAN & TREATMENT

Formulate customized plan and treat areas to remove existing issues

STEP 3 RECOMMENDATIONS & EDUCATION

Give you corrective actions and educate your staff on signs of a problem

STEP 4 MONITORING

Implement tools to monitor treatment effectiveness and alert to activity changes
