▶ FLY CONTROL

Lumnia® Mini

Fits subtly into your indoor space

UP TO 80% ENERGY SAVINGS
compared to similar fluorescent bulb devices[1]

4-YEAR LAMP LIFE
33% longer-lasting than available direct competitor units[2]

ADJUSTABLE ENERGY MODES
to help reduce energy usage and operating costs

LAMPS CONTAIN ZERO MERCURY
to limit concerns of damage to human health or the environment

In customer-facing areas, fly control is a priority. But so is keeping it inconspicuous.

Lumnia® Mini is our smallest and most subtle insect light trap (ILT) for establishments that must control flies in customer-facing areas like bars, cafes, restaurants, and lobbies. With a minimalist design and multiple mounting options, Lumnia® Mini blends easily into many kinds of indoor environments.

LED over flourescent.

As the smallest unit in the Lumnia® range, Lumnia® Mini is perfectly suited for desktop or front-of-house settings. Engineered to catch more flies while lowering your power consumption, Lumnia® Mini uses a 6W LED bulb to provide up to 80% energy savings when compared to equivalent units on the market.[1]

Hygiene matters most.

Health, safety, and sanitation are top concerns for any business. All Lumnia® units are exceptionally hygienic, trapping and covering insects in a way that prevents the fragmentation common in traditional ILTs.

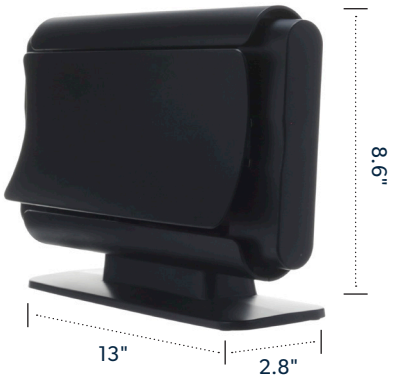

Low-profile design slides into any space.

Built with subtlety in mind, Lumnia® Mini is intended to fade into the background of almost any space. Mountable behind counters or under bars and available in two colors, you can choose the placement and the look that best suits your environment.
