

LUMNIA COMPACT

Versatile design for use anywhere

Fly control and insect light traps may be unavoidable in your business, but why not get the benefit of function and form?

Lumnia Compact is a versatile insect light trap (ILT) designed to match the aesthetic of a wide range of modern businesses, including retail spaces, foodservice operations, hospitality establishments, and offices. It's the perfect complement to public areas, but just as suited for back-of-house areas in small businesses, packing the power you need to eliminate flies.

WHY LED?

Backed by 20 years of research and development by our expert entomologists, Lumnia Compact outputs directional, high-attraction LED light that reaches up to 80 percent further than fluorescent bulb units.¹ The LED lamp also requires less energy than these traditional insect light traps, making it a cost-effective, environmentally responsible, and more sustainable option for addressing flying insect issues.

WHEN HYGIENE IS A TOP PRIORITY

For many businesses, health, safety, and sanitation are of primary concern. All Lumnia units are designed to be exceptionally hygienic, capturing and covering insects to prevent fragmentation which is common with earlier-generation ILTs.

SET THE TONE WITH COLOR

Lumnia Compact comes in five available color options so that you can choose to have your fly control program blend into your environment or add a pop of vibrancy to match your business's decor and personality.
