

LUMNIA SLIM

A small unit that packs a powerful punch

Fly control is essential across your business – including customer-facing areas. But that doesn't mean that it needs to be obvious to customers.

Lumnia Slim is an elegant and discreet insect light trap (ILT) for businesses that require fly control in these types of public spaces, such as restaurants, bars, cafes, lobbies, and reception areas. Its modern exterior helps to disguise its function, making it an ideal complement for high-traffic areas.

WHY LED?

Lumnia Slim is the smallest unit in the Lumnia range, ideal for tight spaces, but not lacking in power. Backed by 20 years of research and development, this model outputs directional, high-attraction LED light that reaches up to 80 percent further than fluorescent bulb units.¹ Its 10-watt LED lamp requires less energy than these traditional insect light traps, making it a cost-effective, environmentally responsible, and more sustainable option for addressing flying insect issues.

WHEN HYGIENE IS A TOP PRIORITY

For many businesses, health, safety, and sanitation are of primary concern. All Lumnia units are designed to be exceptionally hygienic, capturing and covering insects to prevent fragmentation which is common with earlier-generation ILTs.

VERSATILE DESIGN TO BLEND INTO YOUR SPACE

Lumnia Slim is incredibly slender and unobtrusive, you might not even notice it's there. With two color options, you can choose the one that best suits your environment.
